thesis: Population Biology and Ecology of the North Pacific Giant Octopus in the Eastern Bering Sea

Abstract: The North Pacific Giant Octopus (*Doctopus*) is a highly mobile, long-lived cephalopod that inhabits the eastern Bering Sea. This study examines the population biology and ecology of this species, focusing on its distribution, abundance, and life history. Data were collected from 1995 to 2003, and analyzed using a variety of statistical methods. The results show that the population is highly variable in size and structure, and that it is strongly influenced by environmental factors such as temperature and food availability. The study also provides information on the reproductive biology and mortality rates of this species, which are essential for understanding its population dynamics and for developing effective management plans.

Major Professor: Dr. Brenda Norcross

Catherine Patricia Chambers *

Ph.D. Fisheries

B.A., Drake University, 2004; M.S., Southern Illinois University Carbondale, 2008.

thesis: Fisheries Management and Fisheries Livelihoods in Iceland

Abstract: This study examines the fisheries management and livelihoods in Iceland, focusing on the herring fishery. The study uses a combination of qualitative and quantitative methods to explore the social, economic, and environmental factors that influence the fishery. The results show that the herring fishery is a highly important source of income and employment for many Icelanders, and that it is subject to significant fluctuations in abundance and price. The study also identifies several key challenges facing the fishery, including overfishing, climate change, and the need for improved management practices. The findings of this study have important implications for the development of sustainable fisheries management policies in Iceland and other countries with similar fisheries.

thesis: We are the Safety Net: Skills for Suicide Prevention Evaluating a Training to Increase Recognition and Response to Signs of Suicide Among At-Risk Peers

Abstract: This study evaluated the effectiveness of a training program designed to increase the recognition and response to signs of suicide among at-risk peers. The program was developed and implemented by the University of Alaska Anchorage. The study involved a pre-test and post-test design. The results of the study showed that the training program was effective in increasing the recognition and response to signs of suicide among at-risk peers. The program was well-received by the participants and was found to be a valuable tool for suicide prevention.

thesis: The Relationship Between the Indigenous Peoples of the Americas and the Horse: Deconstructing a Eurocentric Myth

Abstract: This study explores the relationship between the Indigenous Peoples of the Americas and the horse, challenging the Eurocentric myth that horses were introduced to the Americas by Christopher Columbus. The study examines the role of the horse in Indigenous cultures and the impact of the horse on the development of the Americas. The results of the study show that the horse was present in the Americas long before Columbus and played a significant role in the lives of the Indigenous Peoples. The study also highlights the importance of the horse in the development of the Americas and the need to deconstruct the Eurocentric myth.

Ph.D. Geophysics

B.S., University of California, Santa Barbara, 2005; M.S., University of California, Santa Barbara, 2010.

thesis: Estimation of Full Moment Tensors, Including Uncertainties, for Earthquakes, Volcanic Events, and Nuclear Explosions

Abstract: This thesis presents a novel method for estimating full moment tensors (MT) for earthquakes, volcanic events, and nuclear explosions. The method is based on a Bayesian framework that incorporates uncertainty in the data and the model. The results show that the method is able to estimate MTs with high accuracy and low uncertainty, even in the presence of noise and incomplete data. The method is applied to a set of earthquakes, volcanic events, and nuclear explosions, and the results are compared with those obtained from traditional methods. The results show that the method is able to detect and estimate MTs for events that were previously undetectable or poorly resolved. The method is also able to estimate the uncertainty in the MTs, which is a significant improvement over traditional methods. The method is implemented in a software package that is available to the public.

esis: Schools in Rural Alaska with Higher Rates of Student Achievement: A Search for Positive Deviance in Education

Abstract: This study examines the relationship between school achievement and positive deviance in education. The study focuses on schools in rural Alaska that have higher rates of student achievement. The study seeks to identify the factors that contribute to this success and to explore the role of positive deviance in education. The study finds that schools with higher rates of student achievement have a strong focus on positive deviance in education. This focus is reflected in the school's culture, its teaching practices, and its assessment practices. The study also finds that positive deviance in education is a key factor in the success of these schools. This finding has important implications for the field of education, as it suggests that schools can improve their performance by focusing on positive deviance in education.

esis: Management of Large Interdisciplinary Team Science Projects: A Multi-Methods Approach to Examining Competencies

Abstract: This study examines the management of large interdisciplinary team science projects. The study focuses on the competencies of project managers and the methods used to examine these competencies. The study finds that project managers with higher levels of competency are more effective in managing these projects. This finding has important implications for the field of team science, as it suggests that project managers can improve their performance by focusing on developing their competencies. The study also finds that a multi-methods approach to examining competencies is the most effective way to assess project managers. This finding has important implications for the field of team science, as it suggests that project managers can improve their performance by using a multi-methods approach to assess their competencies.

**thesis: Valuing Residential Energy Efficiency in Two Alaska Real Estate Markets:
A Hedonic Approach**

Abstract: This thesis examines the relationship between energy efficiency and residential real estate prices in two Alaska real estate markets. The study uses a hedonic approach to estimate the value of energy efficiency features in homes. The results show that energy efficiency features are positively correlated with home prices, and that the correlation is stronger in the Anchorage market than in the Fairbanks market. The study also finds that energy efficiency features are more valued in homes with higher energy efficiency ratings. The findings suggest that energy efficiency features are a desirable attribute for homebuyers in both markets, and that the value of these features is higher in the Anchorage market. The study also provides insights into the factors that influence the value of energy efficiency features, such as the location of the home and the quality of the energy efficiency features.

M. Charles Beier, a lifelong Alaska resident, is dedicated to bettering Fairbanks through his work at the University of Alaska Fairbanks. He has served on the Board of Regents of the University of Alaska Fairbanks since 2011, and is currently serving as the Vice President of the Board. He is also a member of the Alaska State Bar Association and the Alaska State Bar Association.

After working for Alaska's largest employer, M. Beier has a long professional record in the construction industry. He has worked for the state of Alaska, the federal government, and the private sector. He has a degree in Business Administration from the University of Alaska Fairbanks, and has worked in various capacities for the state of Alaska, including as a project manager and as a senior advisor. He is currently serving as the Vice President of the Board of Regents of the University of Alaska Fairbanks.

M. Beier has a long record of achievement in the construction industry. He has worked for the state of Alaska, the federal government, and the private sector. He has a degree in Business Administration from the University of Alaska Fairbanks, and has worked in various capacities for the state of Alaska, including as a project manager and as a senior advisor. He is currently serving as the Vice President of the Board of Regents of the University of Alaska Fairbanks.

With a long record of achievement in Alaska, M. Beier has been a key player in the industry. He has worked for the state of Alaska, the federal government, and the private sector. He has a degree in Business Administration from the University of Alaska Fairbanks, and has worked in various capacities for the state of Alaska, including as a project manager and as a senior advisor. He is currently serving as the Vice President of the Board of Regents of the University of Alaska Fairbanks.
