Atmospheric Sciences: Atmopheric Remote Sensing 666 T Th 2pm-3:30pm in TBD

Instructor: Prof. Kenneth Sassen

Office: IARC 301 Email: ksassen@gi.alaska.edu

Phone: 474-7845 Fax: 474-7290

Office Hours: T Th 3:00-5:00 PM, IARC 301

For homework I will ask for a combination **oc**casional assignmentand a 10-12 (double-spaced) page research paper giving a detailed aoobantemote sensing research topic of your choice. You will provide the background of ur topic through a comprehensive literature search, describe the instrumentagin and theory, and review how the data has added to our knowledge of the atmosphere. So, keep you eyes open for a topic of interest during the semester. The paper will be due one week before the enclasses, but can be submitted at any time.

Ethics:

Do not cheat on your exams or plagiarizery power-you are only chating yourself. Any student turning in a paper not written by him the few (such as copie from the Internet or purchased from a company) will flunk the entire course.

Disabilities:

Students with documented disabilities who may dreasonable academic accommodations should discuss these with me dray the first two weeks of class ou will need to provide documentation of your disability to Disability Seces in the Center for Health and Counseling, 474-7043, TTY 474-7045.

Schedule:

) :	
Lesson Number	<u>Topic</u>
1	Course Outline and Fundamentals
2	Properties of Electromagnetic Waves
3	Principles and Designs of Remote Sensors
4	Propagation of Electromagnetic Waves: Refraction and
	molecular attenuation
5	The Basic 'Radar' Equation
6, 7	Backscattering and Attenuation from Spherical Particles
8, 9	Backscattering andtenuation from Nonspherical Particles
10	Backscattering andtenuation from Inhomogeneous Particles
11	First Exam
12, 13	Meteorological Applications: Cloud Physics Research
14	The Bright and Dark Bands (Sassen and Chen 1995)
15	NEXRAD Radar Applications (NWS)
16, 17	Overview of Remote Sensing Techniques
18, 19	The Multiple Remote Sensor Approach (Sassen 1984)
20	Second Exam
21, 22	Cirrus (Sassen and Mace 2001)
23	Field Trip to AFARS for Data Collection
24	Stratus Clouds (Sassen et al. 1999)
25	Mixed-Phase Clouds
26	Aerosols and Cloud Interactions (Sassen 2001)
27	Convective Systems, Hail and Rainfall
28	Field Trip to AFARS for Data Collection
29, 30	Review for Final
t Dates:	
1/20	First day of class

Important Dates:

1/20	riisi day di diass
2/4	Drop Day
3/25	Last Day for Withdrawls
5/6	Last Day of Classes
9 – 12 May	Final Exam Week
